BRANSON KALEIGH

Individualism and Economic Order Edinburgh University Press

In this collection of writings, Nobel laureate Friedrich A. Hayek discusses topics from moral philosophy and the methods of the social sciences to economic theory as different aspects of the same central issue: free markets versus socialist planned economies. First published in the 1930s and 40s, these essays continue to illuminate the problems faced by developing and formerly socialist countries. F. A. Hayek, recipient of the Medal of Freedom in 1991 and winner of the Nobel Memorial Prize in Economics in 1974, taught at the University of Chicago, the University of London, and the University of Freiburg. Among his other works published by the University of Chicago Press is *The Road to Serfdom*, now available in a special fiftieth anniversary edition.

Pond treatment technology is used in tens of thousands of applications serving many millions of people across the globe - why? Simply because it is efficient and effective. While pond treatment technology offers relative simplicity in its application, it incorporates a host of complex and diverse

mechanisms that work to treat and cleanse polluted waters before their return to our environment. This book offers a comprehensive review of the pond technology field including the newest ideas and latest findings. Topics covered include: The physical, chemical and biological characteristics of the pond environment; A detailed review of pond treatment mechanisms and performance; Comprehensive guidance on pond design, operation and upgrade options; A range of chapters summarising new and emerging pond technologies; The integration of ponds with wetlands and aquaculture systems and their use as storage reservoirs; Special applications of pond technology in cold climates, for agricultural wastes and for treatment of stormwater. The objective of this book is to get this wealth of knowledge "out there" to the users to ensure the continuous improvement and ongoing success of this crucial technology.

This unique book provides a solid understanding of the basics of modeling and assists health care professionals in grasping its uses in creating and implementing informed health care policy. *Modelling in Health Care Finance* offers the quantitative and analytic tools needed for sound

resource allocation and financial governance of health systems. It creates synergies and bridges gaps between quantitative health economics, health financing, and actuarial science while presenting methods for improving the efficiency and lowering the costs of current health systems. A valuable guidebook for health system and health insurance managers alike, this volume traces the foundations of modeling and explains how these very useful and available tools can aid in the design of effective health care policy. In straightforward, non-technical language, the book demystifies the modeling process and provides step-by-step guidance through model construction. From forming health policy goals, identifying options, and analyzing results, to actual implementation, the book demonstrates how managers and policy-makers can make use of models. Written by a team of health care policy experts from the ILO and other contributors, the book also includes a substantial glossary of terms, a section of accessible reference materials, and issue briefs that cover concepts of health economics, mathematics of private health insurance, and basic econometric techniques.

...discusses employment agreements between employers and their key employees. The portfolio primarily deals with employment agreements between corporations and their executives, and includes a discussion of the issues that are typically addressed in those agreements, such as responsibilities and duties, performance standards, change of control provisions, grounds for termination, non-compete provisions and dispute resolution provisions, among others. The portfolio also covers separation agreements and releases. Certain issues that are of particular relevance to publicly traded corporations, privately held companies and corporations that conduct business on an international scale are discussed in the portfolio. Finally, the portfolio includes a discussion of Internal Revenue Code Section 409A, as well as practical suggestions for negotiating and drafting employment agreements.

At the end of the twentieth century, Asia is in the middle of an economic, political, and social transformation. Many countries are poised to enter the next century on a rising curve of rapid economic growth and human resource development. Despite an increasing proportion of national income devoted to health, government resources are not sufficient to maintain existing health systems, meet increased demand, and improve the quality of care. Attitudes about the role of government in financing health care services have also changed. As a result, many countries in Asia have adopted a strategy of encouraging the expansion of the private health sector in health. This book describes these policy shifts and the health sector reform issues in the countries of the region. The actual process of change in six countries: India; Indonesia; Korea; the Philippines; Thailand; and Vietnam is also documented. This collection of papers, by eleven leading international experts, was prepared for the Asian Development Bank's Second Regional Conference on Health Sector Reform: Issues Related to Private Sector Growth, held in Manila in 1996. Management Sciences for Health commissioned these papers and managed the conference for the ADB. The ADB is a regional multilateral development bank with 58 member countries which provided development assistance through loans and grants to 36 countries in Asia and the Pacific. Management Sciences for Health is a non-profit organization dedicated to helping health care policy makers and managers develop and implement practical strategies to meet the challenges

faced by the public and private sectors of health systems.

Pollination Biology Wiley

Pollination Biology reviews the state of knowledge in the field of pollination biology. The book begins by tracing the historical trends in pollination research and the development of the two styles of pollination biology. This is followed by separate chapters on the evolution of the angiosperms; the evolution of plant-breeding systems; the geographical correlations between breeding habit, climate, and mode of pollen transfer; and sexual selection in plants. Subsequent chapters examine the process of sexual selection through gametic competition in *Geranium maculatum*; the effects of different gene movement patterns on plant population structure; the foraging behavior of pollinators; adaptive nature of floral traits; and competitive interactions among flowering plants for pollinators. The book is designed to provide useful material for advanced undergraduate and graduate students wishing to familiarize themselves with modern pollination biology and also to provide new insights into specific problems for those already engaged in pollination research. The book is intended to be used for both teaching and research.

An academy is a new type of school that is publicly funded, supported by one or more sponsors and operates independently of the local authority. Their aim is to raise achievement standards in deprived areas by replacing poorly performing schools. By 2006 46 were operating and there are plans for 200 academies to be opened by 2010. This report looks at the capital and running costs, new academy buildings, academic performance, their contribution to tackling social deprivation, and the management of the programme. The value for money assessment is that academic progress means that the Academy programme is on track to deliver good value for money. However to achieve this goal it needs to pay attention both to managing the capital costs and the sustainability of funding and performance.

Tropical ecosystems house a significant proportion of global biodiversity. To understand how these ecosystems function we need to appreciate not only what plants, animals and microbes they contain, but also how they interact with each other. This volume, first published in 2005, synthesises the state of knowledge in this area, with chapters providing reviews or case studies drawn from research conducted in both Old and New World tropics and including biotic interactions among taxa at all trophic levels. In most chapters plants (typically trees) are the starting point, but, taken together, the chapters consider interactions of plants with other plants, with micro-organisms and with animals, and the inter-relationships of human-induced disturbance with interactions among species. An underlying theme of the volume is the attempt to understand the maintenance of high diversity in tropical regions, which remains one of the most significant unexplained observations in ecological studies.

Presenting a range of evidence for these diverse styles, from Roman art to early medieval bracteate amulets, and from classical texts to Beowulf, the Edda and Icelandic sagas, Professor Speidel here details seventeen different Germanic warrior styles, including berserks, wolf-warriors, club-wielders, long-hairs, ghost warriors and horse-stabbers, and how they indicate an unbroken continuity of customs, beliefs and battle-field tactics. Ancient Germanic warriors played a decisive role in historical events from 200 BC, when Germanic culture first became identifiable, to AD 1000 when Christianity swept through the Nordic countries. Arising from beliefs and states of mind, a variety of warrior styles manifested themselves in differences of dress, weaponry and fighting technique. Fully illustrated with over fifty photographs, this vivid and fascinating survey adds a colourful new dimension to our understanding of the history of Europe.

The Pioneer Families of Cleveland 1796-1840

Belief in the devil and other evil spirits of the Christian tradition is a topic that has been widely discussed in recent years. Since the release of movies such as 'Rosemary's Baby' and 'The Exorcist', more people are wondering, Is Satan really dead? Is there such a phenomenon as obsession or possession? In 'The Devil, Demonology, and Witchcraft', Henry Ansgar Kelly postulates his belief that the existence of evil spirits is not probable and suggests that Christians would be better off acting on the assumption that they do not exist. To prove his claim, the author sets forth a history and analysis of the impact of demonological traditions developed within Judaism and Christianity over the centuries. He then considers the incorporation of these notions into early Christian teaching with the resulting demonological doctrines of witchcraft, possession, and temptation. Kelly's conclusion is that Satan is dead, and demonology should be eliminated from Christian dogma since, according to his thesis, these manifestations in the Bible reflect the beliefs of local cultures and not divine revelation. The present edition has been substantially revised and updated by the author to include an evaluation and critique of 'The Exorcist', wherein Kelly challenges William Peter Blatty's facts of the alleged possession in 1949 on which 'The Exorcist' is based.
