Lernkartei Pflege Springer Science & Business Media

Liver cirrhosis is a major clinical problem worldwide and is associated with significant morbidity and mortality from its complications, such as liver cell insufficiency with coagulopathy and hepatic encephalopathy, portal hypertension with ascites and gastrointestinal bleeding, hepatorenal syndrome, HCC development and others. This volume, the proceedings of Falk Symposium 115 held in Basel, Switzerland, October 22-24, 1999 (Part II of the Basel Liver Week 1999; XI International Congress of Liver Diseases) covers our present knowledge of the aetiologies and

early stages of liver cirrhosis development. Based on this information, strategies are discussed that are aimed at the prevention, early diagnosis and therapy of chronic liver diseases, thus preventing their progression to cirrhosis and its complications, including HCC development. The main topics mentioned above are complemented by three state-of-the-art chapters on modern aspects of medicine in general and hepatology in particular as well as their perspectives beyond the year 2000: 'Molecular Medicine', 'New Hepatitis Viruses' and 'Genetic Liver Diseases: Diagnosis and Therapy'. Introductory chapters focusing on the more basic aspects of the biology of live cells as well as on the mechanisms underlying fibrogenesis, cholestasis and inflammation will be followed by a detailed discussion of the clinically most important

causes of liver cirrhosis worldwide: hepatitis viruses B, C and D; toxins (alcohol, drugs and others) as well as metabolic liver diseases (haemochromatosis, Wilson disease, alpha-1-antitrypsin deficiency, porphyria cutanea tarda and protoporphyria). This book, therefore, will interest clinically oriented basic scientists as well as those in clinical practice, giving an update on many aspects of modern hepatology and its perspectives in the next millennium. *Bile Acids and Pregnancy* Elsevier "Herold: Internal Medicine" is a lecture oriented representation taking account of the topic catalogue for the medical examination for physicians. It is one of the leading textbooks of internal medicine in Germany, if not the leading one. Its enormous popularity is based on the facts that it represents the topics of internal

medicine in an accurate and systematic form and that it has been updated every year since 1982. For further information please refer

www.herold-internal-medicine.com and read the disclaimer.

### **Gastroesophageal Reflux Disease**

Springer Science & Business Media

The present volume contains the edited proceedings of the Vth Symposium of the "Gesellschaft für Nephrologie" held in Lausanne, Switzerland, from September 21 to September 23, 1967. The manuscripts were arranged according to their contents rather than to their titles. An attempt was made to divide the allotted space between different contributors according to the apparent importance or originality of the contributions. Most of the papers submitted were written in either German or a rather inarticulate English, and subsequently, have been translated into English by the editors and their collaborators. The editors are indebted to Mr. R. Darling, student of medicine of the Faculte de Medicine de l'Universite de Lausanne, for reviewing the English translation. Editing was limited to requirements based on form rather than on content. In a few instances, manuscripts which were inadequate in form were accepted because their contents appeared interesting or important. A very few manuscripts were either not submitted or could not be included in the present proceedings, because they did not satisfy the editorial standards. Some papers are published in the present proceedings in abstract form because they have been submitted elsewhere for full publication. The editors' responsibility does not extend to the factual content of the manuscripts. The editors wish to apologize for the long delay in publishing these proceedings, a delay which may be attributed to difficulties in communication and cooperation with various authors.

Vorlesungsverzeichnis Springer Science & Business Media

This volume deals with the structure and function of molecules that have, during the last decade, turned out to have a central role in immune responses. Transplantation antigens were discovered and characterized by Gorer about 50 years ago, and the biological basis for the unequalled complexity of their variability between individuals within a species, in spite of extreme conservation between species, was the subject of intense research and discussion for many years. During the days of belief in "immune surveillance" against spontaneously

developing tumors, it was suggested that histoincompatibility between members of one species would prevent cancer from being a contagious disease and thus a threat to the species. Immunologists involved in human transplantation had to learn and care about the complexity, especially after 1967, when it was found that HLA antigens were the products of the human MHC. Rejection of HLA-identical sibling kidney grafts was so rare, even in those days, that cases of rejection were described in scientific papers.

*Brain and Heart Infarct II* Springer Science & Business Media

Diseases of the gastrointestinal tract are common. There is increasing appreciation of the importance of the immune system in the pathogenesis of a number of these diseases. This book covers basic aspects of innate and adaptive immunity in the gastrointestinal tract, oral tolerance, and cellular and molecular mechanisms of acute and chronic inflammation. Specific diseases covered include bacterial infections, human immunodeficiency virus (HIV) infection, coeliac disease, and inflammatory bowel disease. Other topics include mucosal immunisation and intestinal transplantation immunology. The readership of this book includes clinicians, scientists, and students interested in the gastrointestinal tract.

Gallstones Springer Science & Business Media

John Libbey Eurotext continues to publish the proceedings of the gastroenterology seminars taught by leading European specialists and organised by the European Association for Gastroenterology and Endoscopy (EAGE). The aim of the book is to describe major clinical and therapeutic progress observed during 2003.

*List of Members* Springer Science & Business Media

Endomicroscopy is a newly developed diagnostic tool that enables in vivo microscopy with subcellular resolution during ongoing endoscopy in the upper and lower gastrointestinal tract. It is a revolutionary technology. Endoscopy and pathology are no longer separate subjects and, as a result, endomicroscopy leads to a close interaction between endoscopist and pathologist. This Atlas of Endomicroscopy is the first book dealing with the new insights of endomicroscopy. It provides an overview about the development, the requirements, the technique, current indications and further possibilities of endomicroscopy.

*Honan's Handbook to Medical Europe*

Springer Science & Business Media

Trieste Publishing has a massive catalogue of classic book titles. Our aim is to provide

readers with the highest quality reproductions of fiction and non-fiction literature that has stood the test of time. The many thousands of books in our collection have been sourced from libraries and private collections around the world. The titles that Trieste Publishing has chosen to be part of the collection have been scanned to simulate the original. Our readers see the books the same way that their first readers did decades or a hundred or more years ago. Books from that period are often spoiled by imperfections that did not exist in the original. Imperfections could be in the form of blurred text, photographs, or missing pages. It is highly unlikely that this would occur with one of our books. Our extensive quality control ensures that the readers of Trieste Publishing's books will be delighted with their purchase. Our staff has thoroughly reviewed every page of all the books in the collection, repairing, or if necessary, rejecting titles that are not of the highest quality. This process ensures that the reader of one of Trieste Publishing's titles receives a volume that faithfully reproduces the original, and to the maximum degree possible, gives them the experience of owning the original work. We pride ourselves on not only creating a pathway to an extensive reservoir of books of the finest quality, but also providing value to every one of our readers. Generally, Trieste books are purchased singly - on demand, however they may also be purchased in bulk. Readers interested in bulk purchases are invited to contact us directly to enquire about our tailored bulk rates.

*The Life of Sir William Osler* Springer Science & Business Media

Gastroesophageal reflux disease (GERD) is one of the most common disorders with an increasing prevalence and incidence in the last two decades. This book, edited by two experienced surgeons and a clinical psychologist in cooperation with numerous worldwide leading experts, presents clinically relevant information for gastroenterologists, internists, surgeons, residents and also nurses, who frequently care for GERD patients. Focusing on different treatment concepts - medical, endoscopic as well as surgical - the chapters include the basics of symptomatology and epidemiology, pathophysiology, GERD among different age groups, complications and its treatment, hiatal hernia or H. pylori and GERD, NERD and functional heartburn, diagnostic procedures and also presurgical examination. In addition, the patient's perspectives of disease, diagnostics and treatment are included, the same as

economic aspects of GERD, and the impact of disease on quality of life or patient-reported outcomes after treatment.

**Hepatology 2000** Springer Science & Business Media

The 7th volume of the book series Acute Leukemias provides new updates on the biology of acute leukemias and especially the underlying genetic and molecular events. High quality contributions are provided by leading scientists and clinicians making the book an excellent overview over most recent achievements which translate into new treatment strategies and hence an improved outlook for patients suffering from acute leukemias.

Aus dem Department Innere Medizin der Klinik für Innere Medizin II: Gastroenterologie, Hepatologie, Endokrinologie und Infektiologie Springer Science & Business Media

This book, written by experts on gastroenterology and digestive surgery, provides comprehensive and detailed descriptions of all established and newly developed interventional endoscopic procedures. For each procedure, it addresses: indications; staff, instrumental and technical requirements; and results, potential complications and their management. Also featuring a wealth of images and drawings of the procedures, as well as helpful hints and tips, the book offers a valuable resource for young and seasoned internists and surgeons alike, as well as endoscopy specialists in other fields.

**Current Catalog** Springer Science & Business Media

This book, the proceedings of Falk Symposium 100, 'Gut and the Liver', held in Freiburg, Germany, 29-31 May 1997, comprehensively reviews the physiological and pathophysiological interactions between the intestine and the liver as well as between intestinal and hepatic diseases. Apart from the basic aspects of the intestinal microflora and the immune system of the gut, gastrointestinal permeability and translocation as well as the contribution of the intestine and the intestinal bacteria to the metabolism of bile acids, amino acids and drugs are discussed. In addition, experimental as well as clinical data demonstrating the significance of gut-derived bacterial toxins for the development of liver diseases and the effect of liver diseases on gastrointestinal functions are discussed. The major aim of this book, therefore, is to highlight the interactions between gut and liver at the molecular level as well as in clinical disease.

*Core Procedures in Plastic Surgery E-Book* Springer Science & Business Media

Highlighting new and highly sought-after procedures in day-to-day plastic surgery practice, *Core Procedures in Plastic Surgery*, 2nd Edition, covers key areas of reconstructive, aesthetic, hand, and pediatric plastic surgery—all modified to provide streamlined detail of anatomy, workup, and procedural steps. This unique reference, derived from Dr. Peter C. Neligan's 6-volume award-winning masterwork, *Plastic Surgery*, 4th Edition, provides the high-yield, highly visual guidance you need to confidently perform these procedures and achieve optimal outcomes. Covers key concepts of anatomy, relevant techniques, and information about preoperative and postoperative care and potential complications. Provides quick access to highly templated, bulleted procedures, as well as full-color photos and new procedural videos, including lipoabdominoplasty, post-bariatric, and a variety of facelift techniques. Features new chapters covering the forehead, body contouring, and liposuction and fat grafting, reflecting a growing demand for aesthetic procedures and excellent outcomes. Includes fundamental procedures such as open and closed rhinoplasty, abdominal wall reconstruction, expander/implant reconstruction of the breast, local flaps for facial coverage (including cheek and lip reconstruction), cleft lip and cleft palate repair, flexor tendon reconstructions, and more.

Notes of Hospital Practice; Springer-Verlag

This book, the proceedings of the Falk Symposium No. 139 on "Gallstones: Pathogenesis and Treatment", held in Freiburg, Germany, on January 15-16, 2004, reflects the tremendous advances in the field of biliary diseases both at the genetic and cellular as well as the clinical levels. In industrialized countries, gallstones are a frequent clinical entity with a prevalence of 10-15%. In clinical practice one can differentiate between cholesterol stones, black pigment stones and brown pigment stones. 80-90% of gallbladder stones are cholesterol stones, 10-20% are black pigment stones. The prevalence of cholesterol stones increases with age and in Europe in the 70+ age group reaches about 20% in males and about 30% in females. Gallstones and gallstone diseases, therefore, are a frequent and important clinical problem. The book addresses the basic aspects of gallstone pathogenesis as well as the non-surgical and surgical treatment of gallstone diseases. Of particular interest

are the epidemiology and genetics of gallstone formation, with definition of risk factors, in particular of genetic predispositions. Other major aspects are the hepatocellular and biliary transport mechanisms that predispose to the formation of gallstones. Apart from cholesterol and lipid transport and absorption, gallbladder function plays a central role in gallstone formation. Another clinically very relevant topic is the treatment of gallstone diseases by drugs, endoscopic and other non-surgical interventions, and surgery, as well as the long-term outcome of therapeutic interventions. The volume concludes with a state-of-the-art chapter on "Gallstone Research in the Post-Genomic Era". *Gallstones: Pathogenesis and Treatment* is an excellent update on the pathogenesis of gallstones as well as on the treatment of gallstone diseases, written by an international faculty of outstanding clinicians and scientists. The book will, therefore, be of great interest to hepatologists and gastroenterologists in academic institutions as well as in clinical practice.

Prolactinomas, An interdisciplinary approach Springer Science & Business Media

First multi-year cumulation covers six years: 1965-70.

HEROLD's Internal Medicine (Second Edition) - Vol. 1 Springer Science & Business Media

Most symposia on chronic inflammatory bowel disease during the last few years have focused on new aspects of aetiology and pathophysiology. However, based on such new aspects, changes in diagnosis and treatment have been developed over the last few years and some others are currently under investigation. This book, the proceedings of Falk Symposium 97, 'Clinical Challenges in Inflammatory Bowel Diseases - Diagnosis, Prognosis and Treatment', held in Lugano, Switzerland, 18-19 April 1997, summarizes these changes and new developments, discusses their value and defines further new approaches. The topics include primary diagnosis, definition of different patient groups, special problems of these patients in daily life and very new therapeutic principles. This volume opens new possibilities of diagnosis and treatment of inflammatory bowel disease to physicians and provides stimulation for further development.

National Library of Medicine Current Catalog Springer Science & Business Media

Chronic inflammatory bowel diseases represent an important medical problem,

since they have a devastating impact on the quality of life and require longstanding medical care. Many medical disciplines are involved in tackling the immensely complex studies on pathogenesis, clinical expression and treatment possibilities. This book, the proceedings of the Falk Symposium 105 on 'Innovative Concepts in Inflammatory Bowel Diseases', held in Rostock, Germany, on April 30 - May 2, 1998, brought together experts from different fields of science to allow a unified view on clinical and basic research. The main themes of the meeting were genetics, animal models, immunology, epithelial cells, endotoxin, diagnostic procedures, malignancy, medical therapies, and surgery. In each section of the book experts present state-of-the-art reviews with the very latest developments in the respective research areas followed by chapters on different aspects of inflammatory bowel diseases. They provide suggestions concerning future research and clinical management of patients with inflammatory bowel diseases.

Topical Steroids in Gastroenterology and Hepatology Springer Science & Business Media

The articles comprising this volume were first presented at the World Congress on Neurohypophysial Hormones held in Bordeaux, France on September 8-12, 2001. This conference brought together more than 170 scientists from 18 countries who belong to the different fields of interest representing research in the hypothalamo-neurohypophysial system. Two neurohypophysial neurohormones, oxytocin and vasopressin, exert a variety of central and peripheral actions and thus involve different scientific domains, which too often, even today, do not always find

the appropriate occasion to interact. This volume is composed of chapters dealing with topics varying from basic and clinical neurosciences and neuroendocrinology, to reproductive, renal, cardiovascular physiology and pathology. It encompasses all areas of current neurohypophysial research and should be of vital interest as an integrative reference volume to specialized investigators and as an excellent introductory text to students, scientists and clinicians not yet closely familiar with the field. To ensure novelty and to make sure that all topics of current importance were covered, plenary and symposium speakers as well as poster presentations concentrated on recent advances made in the last few years.

*Progress in Nephrology* Springer

"Es ist ja ganz eineriei, wer es gefunden hat, die Hauptsache ist, daß es gefunden worden ist." This was said by Hermann Wilbrand, director of the department of ophthalmology at the university hospital Hamburg-Eppendorf (1919-1923), when others claimed priority for the long searched for cortical visual center, which he had discovered. Five years ago we tried in Wilsede an unusual experiment, bringing together for three long days and nights scientists and medical doctors to learn like students about each others work. The hope was that the participants in the workshop would discuss the whole problem of human leukemia, and cooperative programmes among the different specialized research groups and medical centers would be stimulated. Now five years later we feel that the experiment was a success. Cooperative research programmes around the world were started and most of us understand more and more the Frederic Stohl man question about the practical application of our

research and its benefit for the patient.

The chairman have done a tremendous job organizing an up to date scientific programme for the third Wilsede meeting. I would like to thank all of them for a programme which includes all the important results and future aspects of human leukemia.

*Cytokines in Hemopoiesis, Oncology, and AIDS* Springer Science & Business Media

Wer kennt es nicht - man ist mitten im Medizinstudium, hat zwar schon einiges, aber längst noch nicht alles gelernt und fühlt sich in Sachen Diagnosestellung alles andere als sattelfest. Und dann kommt sie, die unvermeidliche Frage auf der nächsten Familienfeier: „Du, sag mal, Du studierst doch Medizin, kannst Du mir sagen, was das hier ist?“ - und ehe man sich versieht, wird man mit veränderten Hautstellen, geschwellenen Mandeln und weiteren Symptomen konfrontiert, die man gar nicht unbedingt von seiner näheren Bekant- und Verwandtschaft sehen und wissen wollte. Einerseits schlägt da stolz das Herz in der Brust, andererseits aber nur so lange, wie man mit den Symptomen auch etwas anfangen kann. Was, wenn die Frage zur schuppigen Hautstelle vor dem Semester kommt, in dem die Dermatologie dran ist? Und wenn man auch nicht aus dem eigenen Erfahrungsfundus schöpfen kann? Was, wenn man zwar dunkel ahnt, was Besenreiser sind, aber keine Antwort auf die Frage parat hat, ob man etwas dagegen machen muss? Diese Buchreihe soll auf eine leicht verständliche Art helfen, die meisten und gängigsten Alltagszipperlein zu erklären und zu erkennen. Welche Fragen sollten Sie anderen oder sich stellen, um auf die richtige Fährte zu kommen und Mögliches von Unwahrscheinlichem abzugrenzen?
