Jesse
Walter Fewkes
wrote this
lengthy
volume on
ancient Hopi
pottery after
studying the
tribe for many
years. Fewkes
was an
anthropologist
and a leader of
the
Hemenway
Southwestern
Archaeological

Expedition in
the late 19th
century.
Fewkes
documented
the traditions,
culture and
rituals of the
Zuni and Hopi
tribes in
Arizona.
Fewkes
supervised
several
excavations of
Native
American
sites,
including the
Casa Grande
ruins in
southern
Arizona, a
Hohokam site,
and the Mesa
Verde ruins in
southern
Colorado, an

ancient Pueblo
site. This book
contains his
research
on the styles,
designs and
techniques of
prehistoric
Southwest
Indian pottery,
including Mimbres
and Sikyatki
vessels. He
also
befriended the
famous Hopi
potter
Nampeyo.

Fifteen years ago, approximately half the world population was estimated to live in continental and insular South-East Asia (Burma, Thailand, Kampuchea, Vietnam, Laos, Indonesia, Philippines). Then the region had a population growth of four million people every month, and the problem of malnutrition was acute for the rural population. International agricultural development organisations decided that their primary aim would be to double existing levels of agricultural production and, taking account of population growth, to double it again by the end of the century (Whyte 1976). Today, while global issues have greatly affected the parameters of the problem, the situation remains both serious and difficult. Despite impressive efforts in education and health, Indonesia for example, where population (179 millions) growth eased off only slightly between 1980 and 1990 (from 2.3 percent to 1.9 percent), is having to cope with increasing difficulties in managing natural resources and particularly its

evanescent forest assets which, until 1986, were the second largest source of national revenue. Indonesia has the second largest surface area of tropical rain forests in the world (after Brazil) and thus all the problems linked with management and disappearance of those forests. The latest estimate gives a figure of 109 million hectares of forest in 1990, of which 40.8 million

hectares are production forests (Anon. -F AO 1990).

Columbia University Press Serves as both visual and textual record of the exhibition of the same name, surveying the art of the Middle Byzantine period from the restoration of the use of icons by the

Orthodox Church in 843 to the occupation of Constantinople by the Crusader forces from the West from 1204 to 1261. Conceived as a sequel to the 1976 exhibition "Age of Spirituality," which focused on the first centuries of Byzantium. Preceding the catalogue, 17 essays treat the historical context, religious sphere, and secular courtly realm of the empire, and the interactions

between Byzantium and other medieval cultures. Abundantly illustrated. Annotation copyrighted by Book News, Inc., Portland, OR

Guide to Current Medical Literature and General Index of the Journal

Abingdon Press
In the first major work on the subject for over 30 years, Nancy Edwards provides a critical survey of the archaeological evidence in

Ireland (c. 400-1200), introducing material from many recently discovered sites as well as reassessing the importance of earlier excavations.

Beginning with an assessment of Roman influence, Dr Edwards then discusses the theme of settlement, food and farming, craft and technology, the church and art, concluding with an appraisal of the Viking impact. The

archaeological evidence for the period is also particularly rich and wide-ranging and our knowledge is expanding rapidly in the light of modern techniques of survey and excavation.

In this volume, Richard J. Clifford seeks to make the biblical wisdom literature intelligible to modern readers. It is easy to quote the occasional

proverb, say a few things about "the problem of evil" in Job, or quote "vanity of vanities, " but far more rewarding to read the whole book with an appreciative and informed eye. Opening chapters of The Wisdom Literature comment on the striking similarities between ancient and modern "wisdom literature" and on the comparable literature from ancient Mesopotamia, Egypt, and

Canaan. Thereafter, a chapter is devoted to each biblical wisdom book (Proverbs, Job, Ecclesiastes, Song of Songs, Sirach, and Wisdom of Solomon), studying not only its content but also its rhetoric -- how it engages the reader. General Catalogue of Printed Books to 1955 Metropolitan Museum of Art The transition from the Paleocene to the Eocene Epoch-- approximately 55 million

years ago-- represents a critical moment in the earth's history, when the warmest climatic episode of the Cenozoic era occurred. This sudden global warming resulted in major turnovers among marine and terrestrial organisms. Although this episode has become one of the most popular areas of research in the geologic sciences in the past decade, there has not yet been a work that brings

together the profusion of new results in one volume. This book offers by far the most comprehensive source of data on a critically important interval of the earth's history. The editors have brought together the finest scholars working today on the Paleocene-Eocene transition. Covering mammals, reptiles, invertebrates, and plants, as well as the spectrum of marine biotas,

the book documents both the well-established and the lesser-known turnovers, such as those of the calcareous nannoplankton and terrestrial mollusks. The volume is also notable for its integration of knowledge culled from a wide variety of disciplines, geographic settings, fossil groups, and paleoenvironments. With 21 contributions and more than 180 illustrations, this book will

be of great value as a reference source for a wide spectrum of scientists, from marine geologists and oceanographers to paleontologists, paleoclimatologists, and stratigraphers. [Agrindex](#)
Om portrætter af den franske maler Jean Auguste Dominique Ingres (1780-1867) *Nouveau Larousse illustré*
This magnificent volume explores the epochal transformation

s and unexpected continuities in the Byzantine Empire from the 7th to the 9th century. At the beginning of the 7th century, the Empire's southern provinces, the vibrant, diverse areas of North Africa and the eastern Mediterranean, were at the crossroads of exchanges reaching from Spain to China. These regions experienced historic upheavals when their Christian and

Jewish communities encountered the emerging Islamic world, and by the 9th century, an unprecedented cross-fertilization of cultures had taken place. This extraordinary age is brought vividly to life in insightful contributions by leading international scholars, accompanied by sumptuous illustrations of the period's most notable arts and artifacts. Resplendent images of authority, religion, and

trade—embodied in precious metals, brilliant textiles, fine ivories, elaborate mosaics, manuscripts, and icons, many of them never before published—highlight the dynamic dialogue between the rich array of Byzantine styles and the newly forming Islamic aesthetic. With its masterful exploration of two centuries that would shape the emerging medieval world, this

illuminating
publication
provides a
unique
interpretation
of a period
that still
resonates
today.
